

<b>PRODUCT NAME</b> <b>SEMI-AUTONOMOUS HARVESTER</b>	<b>THEME</b> <input checked="checked" type="checkbox"/> SELF-SUFFICIENCY <input type="checkbox"/> FUTURISTIC SCIENCE	<b>SUBMITTED BY</b> <b>Tom Quinn</b>
---	--	---

**NOTES**

This device controls a vehicle on "tank" treads. It starts at position (0,0) pointed in the (1,0) direction. It receives (x,y) XBus packets over radio and must navigate itself to those coordinates and activate its harvesting tool. To move the vehicle forward, set the power of both treads to 100. To turn left, set only the right tread to 100. To turn right, set only the left tread to 100. It must turn as little as possible, preferring left turns where otherwise equal.

INPUT/OUTPUT	TYPE	TIMING DIAGRAM
<b>INPUT</b>	<b>XBUS</b>	
<b>OUTPUT (left tread)</b>	<b>SIMPLE</b>	
<b>OUTPUT (right tread)</b>	<b>SIMPLE</b>	
<b>OUTPUT (harvester)</b>	<b>SIMPLE</b>
